1. Legal Warning

This is not an offer of securities, advice, or solicitation.

This technical documentation is provided for informational purposes only. It is not intended to be investment advice, solicitation of any kind, or procedural guidance and solicitation for the user in trading.

THE CREST Token and its **MY COFFEE** ecosystem by acting in accordance with information obtained from technical documentation, websites and other materials produced by the brands, you will be fully responsible in the event that forward-looking statements do not materialize.

Any decision or action you take based on the information presented in this technical documentation or associated websites will be made at your own discretion or risk.

1.1 Future Projections

Some of the informational data set forth in this white include clues and forward-looking information relating to the future **THE CREST** Token, future events, and projections. These statements can be identified by certain words and phrases such as "estimated," "expected," "projected," "anticipated," or words of similar meaning. These forward-looking statements are also included in other available marketing materials, such as videos, blog posts, etc. that involve the ecosystem.

The information contained in this technical documentation may include, among others

1. the expected performance of the project.
2. completion of old and new stages or changes in the project.
3. the development expected in the project
4. Future agreements, and the execution of the project's vision and strategy. Forward-looking statements involve a variety of risks and uncertainties, including time delays. These statements are not guarantees of future performance and undue reliance should not be placed on them.

1.2 Project Guarantees

There is no guarantee of the ecosystem of **MY COFFEE** and its **THE CREST** Token but one of the founders already did a similar project and the result WAS EXCELLENT (none of its users in the community lost a dollar and made a profit compared to the fall of the markets of the 2021 and 2022) also has more experience and a better team of professionals with the best intentions to achieve your ambition

projected and can be listed on the best Exchanges in the market... You are advised to carefully evaluate the risks and uncertainties involved before making any decision. No promises are made as to the value of the Token or future performance.

The only guarantee that can be offered to the adopter of the ecosystem is good values, a very professional team, transparency, and good intentions of **THE CREST** team, it's **MY COFFEE** Ecosystem and associates to help and improve the quality of life of the adopter and as a rule shine transparency and good intentions.

2. Introduction

2.1 The economy and financial Distrust

The Great Recession which is known as the global economic crisis began in 2008, and originated in the United States. Among the main factors attributed as causes of the crisis are failures in economic regulation, the large number of crimes committed by banks, the overvaluation of products, the world food, and energy crisis, and the threat of a recession throughout the world, as well as a credit-mortgage crisis and confidence in the markets and above all on the bench traditional.

This was not only the worst economically that has been experienced worldwide, but also the possibility of new creations such as cryptocurrencies and the birth of the most powerful today, Bitcoin, where the communities that previously represented a high percentage of their investment, stock markets and stock markets now suffer from great mistrust after the 2008 financial crisis around the world and begin to take a lot of interest in the use of the mother cryptocurrency and its peers when investing.

2.2 The problem and fraud with cryptos, tokens, icons, videos, etc.

Despite the fact that a huge revolution has arrived in the world of cryptocurrencies and tokens, it is also true that the use of cybercrime has prospered without limits and has affected one of the best industries, Network Marketing, and businesses of tokenization where creators only seek personal performance and abandon their own community.

Also, the use of bad practices and misleading information to offer cryptocurrency or token projects where packages of worthless coins are sold that do not prosper in the market, projects where resources are spent, promise fixed returns, have no liquidity, and create demand or their audits were not transparent. If we also add the fact that the creation of an ICO (Initial Coin Offering) failed in its objective to raise funds or closed its doors until the current years 2021-2022, taking the money raised and then disappearing, or slowly and gradually diluting without us ever hearing from them again. For this reason, the market has become more demanding when it comes to offering a sustainable project and this is where we come in with a solid and real product where SAFETY AND REAL SUPPORT are given.

2.2 The solution

THE CREST Token was born with the vision and premise of being part of and being a fundamental player in the new era of Blockchain technology; making room by combining two important agents such as "raw materials" and "Blockchain Technology" to break into the heart of all countries and standardize a value at the regional level for a currency of daily use of the global scope.

For years the Referral Marketing Industry

I had unsuccessfully tried to be part of the crypto market, giving rise to pyramid schemes, fraud, ponzi scams, dubious businesses such as Madoff, and EverGrande in 2021 and therefore the loss of credibility in the real estate sector, but now with **THE CREST** the wait is over, the perfect fusion between the model of raw materials such as coffee with **MY COFFEE** and a Crypto Ecosystem, giving rise to a **THE CREST** Token in the market, with guaranteed adoption and usability.

3. The Opportunity

3.1 Review

- * In 2008 an anonymous programmer with the pseudonym Satoshi Nakamoto introduced the world to Blockchain and cryptocurrencies.
- * Since 2012, thousands and thousands of altcoins have been created, alternative cryptocurrencies to Bitcoin, most of which are based on speculation and deception.
- * However, launching an altcoin requires a high investment in traditional marketing.
Media, Discounts, Airdrops Promotions, Events, Online Advertising.
- * Up to 50% of the proceeds can be spent on traditional marketing.
- * The problem is that traditional marketing offers no guarantee of success and decapitalizes the resources of the community and its founders.
- * As a project we consider using referral marketing in the most efficient way. A social media advertising model and extensive experience in merging the traditional and new financial world with Blockchain technology.
- * Mixing the most successful business model in history (**Network**) with the most innovative and profitable digital product (**Token and NFTs**) and with a tangible product such as coffee (**the entire MY COFFEE ecosystem**) gives us the launch of an ambitious and very elaborate.

3.2 Utility

Exchange value and payments in a natural, simple way, anywhere in the world and that gives control to you and not to any intermediary. At the same time, its adoption and use make it a strong option to increase and protect our personal and business assets with private wallets, both physical and online.

Its decentralized origin allows the elimination of expensive and unnecessary additions that make any movement that we want to do with our money more expensive. **THE CREST** global expansion brings the singular of people closer to Blockchain, finance, technologies, and the new digital age.

3.3 Mission

develop a token in the Blockchain for investment in special Colombian coffee of origin from different parts of Colombia, taking advantage of its high demand and price in the foreign market, the best coffees of origin will be selected to obtain a quality product that is listed nationally and internationally at the best possible price.

Every time the demand for specialty coffees grows in the world, coffee is one of the most consumed drinks on the planet and the process from planting greatly influences the final flavor, hence the different processes that are applied to it give much more value to each grain served in a cup.

Our project has several components and the objective is to use Blockchain technology to solve each of the problems that are currently experienced during the transformation of the product from planting to the final consumer.

THE CREST aims to promote the utilization and implementation of crypto assets and the attributes of Blockchain technology today and bring about a great transformation around the world by offering diverse, reliable, and trustworthy ways to earn income; instill hope through opportunity; to build trust through reliability; to create a community through collaborations and support; to inspire people to dream again by developing a clear plan in buying and selling digital assets through the coffee (raw material) market.

3.4 Visión

The majority of coffee growers in the Colombian country are heirs by tradition and have small and large extensions of high-quality technical coffee, but unfortunately the cost of fertilizers and inputs for cultivation and being able to obtain quality coffee increases with the value of the coffee price., , Unfortunately, the price of Colombian coffee goes hand in hand with international prices, and the special cultivation and pre-enlistment processes for the grower go into the background, leaving the business only to

intermediaries, even the democratization of coffee exports in Colombia only began recently by allowing any producer to export up to 50 kg of the coffee maximum per He sent roasted as many times as he wanted, previously only the threshers and exporters registered with the Colombian Federation of Coffee Growers could export.

What we want is to take advantage of **THE CREST** token generated to obtain investment from around the world to acquire this coffee directly from the producers and growers or even the cooperatives of each region, carry out special processes, and offer it to everyone, with the advantage that by "avoiding intermediaries the yields are quite interesting" and the objective is to be able to reward the producer by giving him a better purchase price (due to the liquidity obtained at the

launch of the token, a % in the yields of the national and foreign sale of the physical points of sale and other added values that will be discussed later).

Through its developer and support Blockfactory (www.blockfactory.es) we will also be able to generate the largest regional platform that promotes the development of ventures with our talents in Blockchain technology, developers and programmers of all kinds, in a sustainable and transparent way, generating a change in the ecosystem around this technological revolution and to be able to improve the quality of life of people through its use in different industries

3.5 Coffee Process

Currently, there are different methods in which coffee can be processed after harvesting.

These processes depend on environmental issues (climate, precipitation percentages, water availability, etc.) and also the characteristics we are looking for in the cup since the way it is processed has a great influence on the final flavor.

- Natural or Dry Process

The dry method is also known as the natural process and is perhaps the oldest and simplest since it requires little machinery (although more labor).

The method consists of drying the whole cherry after having collected it, without removing the skin or shell.

The ways in which this process is carried out can vary depending on the facilities available or the size of the plantation/production, but in general terms, this is the process:

First, the collected cherries are classified and cleaned, to separate those that are not ripe or that are damaged or affected by any insect.

This can be done by hand or also in washing channels, where the ripe cherries float and the defective or green ones go to the bottom of the channel.

The cherries are then laid out on drying patios (usually) or on mats or beds raised off the ground (African beds).

As the cherries dry, they must be moved so that they all dry equally.

Drying in this type of process generally takes 20 days, although depending on weather conditions, it could take up to four weeks.

- In very large plantations, part of the drying is sometimes done by machine to speed up the process, but not before the coffee has been dried in the sun for a few days.

- The drying stage is of vital importance since it affects the final quality of the green coffee, and naturally the flavor: if it dries too much, the coffee will become brittle and can be damaged in the threshing process. A broken grain is considered a defective grain.

- If it doesn't dry out enough, it will have too much moisture and will be much more susceptible to fungus and bacteria.

- This natural process is used for approximately 90% of the Arabica coffee produced in Brazil, for the majority of the coffee produced by Ethiopia, Haiti, Yemen, Indonesia, and Paraguay, and also for some Arabicas produced in India and Ecuador.

Likewise, almost all Robustas are processed in this way, especially in areas with a warm and consistent climate, little rain, and/or water scarcity.

* This process is much more difficult to carry out in areas with more rain and high atmospheric humidity. In terms of flavor characteristics, coffees processed in this way tend to have a high body, low acidity, and exotic flavors. It is also common to find vinous flavors, and fruit intensity.

Washed coffees or wet processes.

This method differs from the dry method in 2 fundamental aspects. The first is that in the wet process, considerable amounts of water are required, as well as specific equipment.

The other fundamental difference is that, in the wet process, the pulp is separated from the coffee beans, which does not happen in the natural process.

Image result for natural coffee wash The wet process is carried out as follows:

The beans are collected (usually by hand) and then a selection is made to remove leaves, green beans, stones, and any other impurities or dirt that may have been mixed at the time of collection.

The next step is to separate the pulp or shell from the grains contained within the cherry... This process is known as pulping and is done with a machine that squeezes the cherries between fixed and mobile plates. The shell is on one side and the grains are on the other side.

The beans, now devoid of the shell that covers them, are covered with a viscous substance known as mucilage or coffee honey.

In the washed process, the mucilage is completely removed and for this, the grains are placed in fermentation tanks until the mucilage that covers the parchment loses its mucoid texture and acquires a rougher touch.

For most coffees, it takes between 12 and 24 hours for the mucilage to be completely removed. This also depends on the environmental temperature, the thickness of the mucilaginous layer, and the concentration of the enzymes.

The washed parchment coffee at this stage has approximately 57% moisture.

To lower the humidity to the maximum level of 12.5%, the coffee is dried either in the sun, or in a mechanical dryer, or by combining the two methods.

Sun drying is done on large, smooth brick or cement surfaces called patios, on mobile wooden beds, or on fine-mesh wire tables. The beans are spread out in layers between 2 cm and 10 cm, and are turned frequently to achieve uniform drying. Sun drying should take 5-10 days, depending on the ambient temperature and humidity.

On large plantations where at the height of the harvest there may be much more coffee than can be effectively dried on the terraces, it is necessary to use hot air drying machines. However, the process requires great care to achieve satisfactory and economical drying without compromising quality.

The wet method is generally used for all Arabica coffees, with the exception of those produced in Brazil and the aforementioned Arabica-producing countries that use the natural method. It is rarely used for Robustas.

The flavor attributes of washed coffees are lighter bodies, cleaner cups, more fruity and floral flavors, and brighter or more intense acidity.

Most of the countries recognized for the acidity of their coffees process their coffee under the washed method to preserve these characteristics.

Honey Method.

This way of processing coffee is fundamentally the same as in the washed method, with the only difference being that in the honey process, the mucilage is NOT removed, but the coffee is dried with this substance, still covering the beans.

Contrary to what some imagine, coffee processed in this way does not taste like honey, nor is honey used in the process. It gets its name because to the touch, as it is covered with mucilage, it feels

sticky like honey.

In some regions, there are 3 different types of honey processes: Yellow, Red, and Black.

- The biggest difference is in the flavor, which develops as drying times and techniques are adjusted:
- Yellow Honey dries the fastest (approximately 8 days) and it is in this method that the coffee receives the most sun, giving the parchment that covers the coffee bean a light yellow hue by the time it is finished. to dry up
 - Red Honey takes a little longer to reach optimum moisture level. In this method, the coffee is dried in the shade or without direct sunlight, and for this reason, it obtains its characteristic color.
 - Black Honey or Black Honey takes the longest amount of time to dry, and in this method, the coffee is covered with black plastic on beds similar to African beds.

The latter is the most complex of the 3, with a high body, rich in flavor, and is naturally more expensive on the market.

It should be noted that the result is not a completely black parchment coffee, but rather a little darker than the red honey.

The drying of the parchment even with the mucilage coating directly impacts the sweetness in the cup. Honey coffees generally have a unique flavor characterized by a distinct sweetness, many fruit flavors, and sweet acidity.

Of the 3 most common processes, El Honey and El Natural are the most environmentally friendly because not a single drop of water is used when pulping, washing, or fermenting.

This saves large amounts of water.

Both methods can be implemented in remote areas as it eliminates the difficulties involved in transporting the collected cherries to the processing center, which in many cases is not close to the crop.

This transport can even cause, in some cases, unwanted fermentation problems and potential quality degradation.

Tell us in the comments if you have any taste preferences according to the way you process the coffee.

4. Usability and market

Since our beginnings, we have always had enormous concern in the market, both in the Exchange platforms (due to their speculation) and the internal market due to the decentralization of a currency, a problem so serious that it has worsened over the years to more than 10,000 cryptocurrencies and more than 2,000 listed on the most famous indicator, CoinMarketCap, (<https://coinmarketcap.com>), a problem so serious that it has affected Bitcoin itself and has led to several participations such as Bitcoin, the most famous of them, and the most important thing, usability, has degenerated.

From the beginning and the most basic rule of Bitcoin was always P2P (peer-to-peer), a peer-to-peer network in which cryptocurrency becomes a fast means of payment, almost no cost, but it was given the usability to be able to replace the monopoly of payment gateways and banks, today without a place

#	Name	Market Cap	Price	Volume (24h)	Circulating Supply	Change (24h)	Price Graph (7d)
1	Bitcoin	\$73.661.335.545	\$4.233.80	\$7.208.803.822	17.398.400 BTC	10,57%

to We can certainly say that in 2022 it has not yet been achieved and that many cryptocurrencies promise such acts, but they are lost on the path of speculation, inflation and lack of interest in using them. With **THE CREST** Token, we are not looking for that under any circumstances, usability must be immediate, it must be liquidated and it must promote use value at all costs using the Token for coffee or the management of NFTs or other raw materials that physically exist and none of the owners You will be able to keep the asset as your own.

5. Business model

Coffee is one of the most consumed beverages in the world, but in the case of Colombia, in particular, coffee producers bear the least part of the profits, this is due to the fact that for many years semi-state entities had a monopoly on it, the Economic openness allows growers to export or directly produce coffee, but the lack of knowledge in the current fields of marketing and finance makes our growers bear the odds, we have even known of cases of growers who were deceived through contract tricks to future to guarantee them a price in case it falls, when the current conditions in Brazil indicated shortages and therefore the price would rise, geisha and java coffee growers (high-value specialty coffees) are also seen being sold at normal coffee prices even 85% coffee rates were sold at normal coffee prices.

Due to this, what we are going to do is a social economic token (**THE CREST**), which we take advantage of the liquidity provided by the crypto market and use it to acquire quality coffee at a better price for the coffee farmer and from there process it, sell it to their better price, receive the sale in crypto or Fiat money, inject liquidity into the token again to give the token a higher value and from there obtain profitability and everything that accompanies the ecosystem.

The coffee acquires much more value due to the process with which it is made, due to that we have certified master roasters and, in the team, we will be accompanied by an associate who works with the Colombian Federation, which is a specialized entity throughout the country that manages training of Colombian baristas and roasters.

From **MY COFFEE** everything starts from social work, which is to pay a better price than what the current market pays for the raw material of Coffee.

In addition, the roasting plant in **Manizales** allows selecting the best beans to obtain coffees of very good quality and palatability with the different processes.

Currently, there are international contacts to acquire this coffee, although the intention is to increase profitability through token sales (to create the ecosystem) and also the use of the Amazon fulfillment platform for the logistics process of the entire process until the buyer's house.

5.1 Social component

From **MY COFFE** and **THE CREST** token, everything starts from social work, which is to pay the farmer a better price than he currently receives in the market.

Due to the large margins that exist between the purchase price, the transformation of the raw material to obtain the final product, and the difference in the rate, the peasants who are so punished in this society, we can give you a greater profit because we firmly believe in They are the pinnacle of the Colombian ecosystem due to the work they do.

5.2 Utilities

The process to obtain the profits would be the following:

1- An (initial public offering) of **THE CREST** token is optionally launched to obtain liquidity and be able to make a purchase of coffee, we can do well with the Federation of Colombia

<https://federaciondecafeteros.org> (a little more expensive but to give more security for the first initiates) or get it in green or even in cherry (cherry is the ideal fruit for some special processes) to start with growers from the coffee region initially and their coffees of origin

- This coffee, due to the liquidity that the token gives us, will be paid at a better price to the grower.

2- With the coffee growers we can use the processing plant that we have in **Manizales** (department of Caldas) with technical processes to carry out the different processes for the generation of special coffees, being able to extract different types of coffees from the traditional washed coffee to special processes for honey, aged and natural coffees (fruit fermentation).

3- Specialty coffees are offered on different platforms, even in their own Marketplace to accept cryptocurrencies, and anyone can purchase coffee with cryptos and with our token. This is an excellent way to continue injecting liquidity into the token and inventory rotation (although the coffee special is so coveted in the national and international markets)

4- We will use the **Amazon fulfillment** platform for delivery and generate the international price index for each pound of coffee.

5- Each token is initially equivalent to \$0.1 and representative tokens are issued for the amount of real coffee existing or liquidity "not used and available for purchase". The other tokens are minted as they are exchanged when there are more purchases and the community grows, in this way we avoid contract creators' wallets with gigantic tokens that can affect the market, also the main wallet with the tokens will be totally blocked in such a way so that none of the creators

can use the tokens to exchange them, except those generated at the time of each purchase and the fact of leaving liquidity untouched we ensure that all the coffee is sold and returns in profit.

6-The buyer of the token receives as off-chain liquidity an equivalent in % of a pound of coffee processed per token, hence the token would be directly related to the price of specialty coffee and not to the price of international coffee, something similar to wines, which, although they are from the same grape and strain due to their processes and the lot, have special characteristics that give value to their price, hence the wines for USD 3 per bottle and those for USD 1,000 per bottle.

7-Once the coffee is monetized, liquidity is injected into the token and the different dividends are made for all investors, being able to return the token to the source.

The process currently calculated (date October 2022) to produce a pound of processed coffee ranges from \$25,000 COP to \$35,000 COP in Colombia, USD 5.65 - USD 7.9 per pound depending on the process and the type of coffee, these same specialty coffees are quoted on average from \$15USD - 100 USD per Pound.

5.3 Monetization and Product

For the token investor, there are several ways to Monetize:

1. You can monetize on the Blockchain through our web 3.0 from the page www.mycoffee.pro Through the private Exchange (in-process and tests... and if the tests are positive it will be launched in 2023) where you will exchange your tokens for BUSD and other pairs on the Binance Chain (BC).
2. In the DEX (such as PancakeSwap (<https://pancakeswap.finance>) among others, it is the technological evolution of a traditional decentralized Exchange which transfers all its operations to the Blockchain running on powerful Smart contracts, with which everything is managed within the platform... when there is a large community because starting at the beginning is not advantageous and is very risky.

MYCOFFEE

Premium Quality

MyCoffeePremium

3. Monetize it through the official wallet and the store at www.mycoffee.pro/store
4. Marketplace from the web, you can exchange tokens for coffee or items with an emphasis on coffee preparation and souvenirs with a discount price for a possible resale, example: you buy 50 kilos in the Marketplace (an online coffee store that accepts cryptocurrencies) at a "discounted" price than in the international market and sells the product nationally or internationally by having a prior license and barista course with us.
5. The intention is to create an ecosystem that works around coffee and the token, so in the Marketplace, it will be possible to buy a wide range of items and special or traditional coffees with tokens.
6. Telegram bot. A service of how to unite buyers and sellers with a P2P system
7. Physical points such as **3 points of sale already available (one of them in Bogotá)** or different points of sale in the future in Colombia or other countries when we expand (conditions and the possibility of creating franchises apply).
8. Arrive at New Exchanges to be able to test the code, with time and a large community the goal is to be the largest.

MYCOFFEE

Premium Quality

MyCoffeePremium

5.4 Online store – Functions

You will have the opportunity to purchase products at low cost which separately would be very expensive.

A fundamental part of the **MY COFFEE** ecosystem is usability, for this, we have created www.mycoffee.pro/store (which will be continuously updated).

Products generated specifically for the **MY COFFEE** community and products established from large alliances with companies from different niches.

THE CREST Token can be purchased through an ICO or store on the www.mycoffee.pro website by connecting your wallet and then in a traditional way from the web.

PRESALE

From: 0 BNB

To: 0.00 TCT

Price: 2544.9424 TCT per BNB

CONNECT WALLET

5.5 Adopting businesses (Vending)

We intend to enter chain stores both in Colombia and other countries. As the ecosystem progresses. In addition, with the training that will be provided to the Token holders, they will acquire cheap roasted coffee in Colombia and will be able to export it through the advice and training of our Partner AV María Café, who are specialists in exporting and maquila of all kinds. types of coffees and we will also make alliances with Coffee Shops and coffee shops around the world.

* Example of a point of sale in Bogotá which you can visit in the Sabana Plaza shopping center (it is not yet suitable with the **MY COFFEE** and Parents brand (AV Maria and **THE CREST**).

5.6 Currency Appreciation

Like any cryptocurrency backed by a commodity, the appreciation of **THE CREST** Token in the medium and long term will be guaranteed by the price differential of the conversion of raw material to a finished final product (a special coffee) and will obviously have interesting profit margins by eliminating the chain of intermediaries and put the world to buy the coffee fruit through the Blockchain.

The more coffee we buy, since Colombian coffee is a finite product, we would be talking about an increase in local and therefore international prices, since Colombia is one of the largest producers of Arabica coffee. In addition, the consumption and sale of different points of sale will help to grow the price of the token and we have an association agreement with a Network that will give them a re-consumption and education that will greatly satisfy the community.

Once the community grows, the more usability it has and the more liquidity there is in the exchange markets and points of sale, the appreciation of the currency will be a fact.

With our store www.mycoffee.pro/store, we will allow you to make your purchases easily and safely using **THE CREST** Token.

6. Current and future products

1. Points of sale and franchises with the coffee brand.
2. Purchase of arable land, anticipated harvests, and products derived from coffee and daily use in the preparation of this drink.
3. Tokenization and NFT of coffee or other commodities.
4. Help build new projects, and places and reap future rewards in coffee real estate or other commodities.
5. Advice, course, and monetization in individual purchases of coffee or other raw materials.
6. Rewards and Farming services for Holders (debatable and modifiable for the future and preservation of a good business).

7. Representatives by provincial or state areas or countries.
8. Purchase of machinery and merchandising for points of sale.

6.1 quality documentation

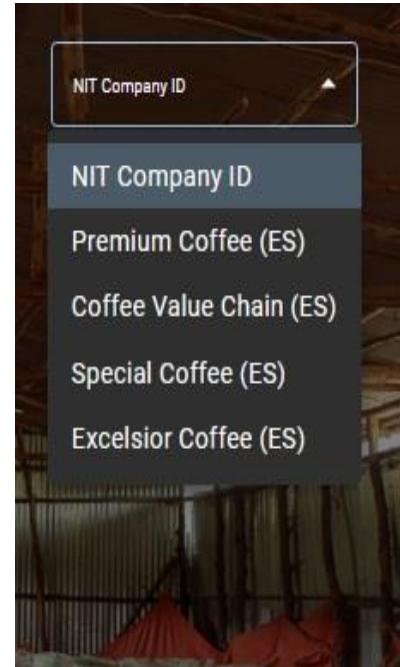

We comply with the highest export standards, associating ourselves with companies that know how to do it and that have years of experience in the transformation from large to cup (we do not improvise with quality). You can find all the documents directly from the web at www.mycoffee.pro:

1. Technical Sheet – Excelso Coffee
2. Technical Sheet – Premium Coffee
3. Technical Sheet – Special Coffee
4. coffee value chain
5. company registration MY COFFEE SAS
6. Procedure document in INVIMA (**in procedures with Av Maria Café**)
but for now we use Invima Registry: NSA-002189-2016
Inscription F.N.C DC 1-240-09)

7. Export Registration (**in procedures with AvMaria Café**)

- 8 and 9. A toaster and Thresher Certificate (**will be processed after having a warehouse in Bogotá and own machinery**) possibly in February 2023.

You will find some documents on the web; others will be in the process due to the complexity of the development at a legal and health level and we will notify you of the updates.

7. Associations

7.1 Company MY COFFEE S.A.S.

You can review the constitution of the company at <http://www.rues.org.co> with its NIT: 901654912 - 7 before the Chamber of Commerce of Bogotá (Colombia) as a simplified stock company (SAS) and its 4 founders. In the future update of the Whitepaper, the company documents will be included due to the delay in legal matters and associations, and the statutes will be changed according to the functions. For example, for the management of INVIMA, export, and analysis of product quality through a Toaster, Thresher, etc. own.

7.2 Av María Café

<https://instagram.com/avmariacafe>

You can check at <http://www.rues.org.co> with your NIT: 75103360 – 2

Av María Café was started by its creator Ángel Londoño in 2010 as a food delivery business model, later it evolved through family tradition, and having met one of the partners of the great multinational TOSTAO, he fell in love with the world of coffee and surrounded himself with baristas, roasters, and experts in the world of coffee where he went for years to

events or EXPO of the coffee world.

Ángel began to create coffee points (carts) on December 5, 2016, and it was a process of growth and experience in search of the best brands, and raw material processes in Manizales until reaching mobile to physical points of sale and with all his experience became an expert in the purchase and sale of foreign machinery, design of mobile or physical points of sale and hiring of personnel to be able to manage the mini coffee Shops.

7.3 Token The Crest - TCT

THE CREST Token is the digital currency of the entire **MY COFFEE** Ecosystem and you can find it on the web at www.thecrest.io It will also be used for any other tokenization or usability project that previously passes a quality and security filter in raw materials, land, mine, premises of all kinds, etc.

With the Token based on the Binance network, we make sure that the support is strong enough both on the Blockchain and on high-end Exchanges. value and every token that is issued will be backed.

7.4 Blockfactory - Incubator

Block factory <https://blockfactory.es> is a talented company in the cryptographic world that develops technology, applications, and projects based on Blockchain. Created on November 26, 2018, by its founder Gorka Carballo. He is dedicated to advising projects, his brand has been present at several cryptography festivals. Block factory manages and hires several programmers and entrepreneurs to develop all kinds of products to give usability to the Token www.thecrest.io You can check at <http://www.rues.org.co> with its NIT: 901234202 – 4 The services of which have are:

- * Blockchain Development, Cryptocurrencies (POW/POS/Hybrid), Crypto Tokens (Token with Smart Contract), PoW/PoS Mining, Websites, wallets, DEX, etc., Comprehensive development and launch of ICOs, Web Pages and Hosting, Online Security, General Advice, BackOffice, Exchanges, and Blockchain Events.

7.5 DEX

Releases on PancakeSwap (<https://pancakeswap.finance>)

PancakeSwap is a decentralized cryptocurrency exchange for trading BEP-20 tokens. The PancakeSwap exchange does not use order books like traditional exchanges. Instead, it uses an automated market maker (AMM) model that compares buy and sell orders directly with others in a liquidity pool. User deposits maintain liquidity pools.

Nomiswap (<https://nomiswap.io>) trading without intermediaries or annoying identity verifications is attractive to most. One such DEX is Nomiswap, which is backed by Nominex, a centralized platform. Thus, users have the benefits of Defi and Ceci in one place.

Nomiswap is a decentralized cryptocurrency exchange that focuses on tokens from the Binance Smart blockchain.

Chain. The Exchange is relatively new, having been released on the market in January 2022. It was also audited by Certik, who gave it a trust score of 88/100.

7.6 Own Exchange

With our own Exchange we will have several ways to directly exchange your tokens for other cryptocurrencies and one of them is using the Exchange and the P2P option.

Peer-to-Peer, commonly known as P2P, is a popular avenue for crypto users. Unlike conventional cryptocurrency exchanges, P2P markets allow you to buy cryptocurrency directly from other users using your preferred payment method and the local currency within the exchange.

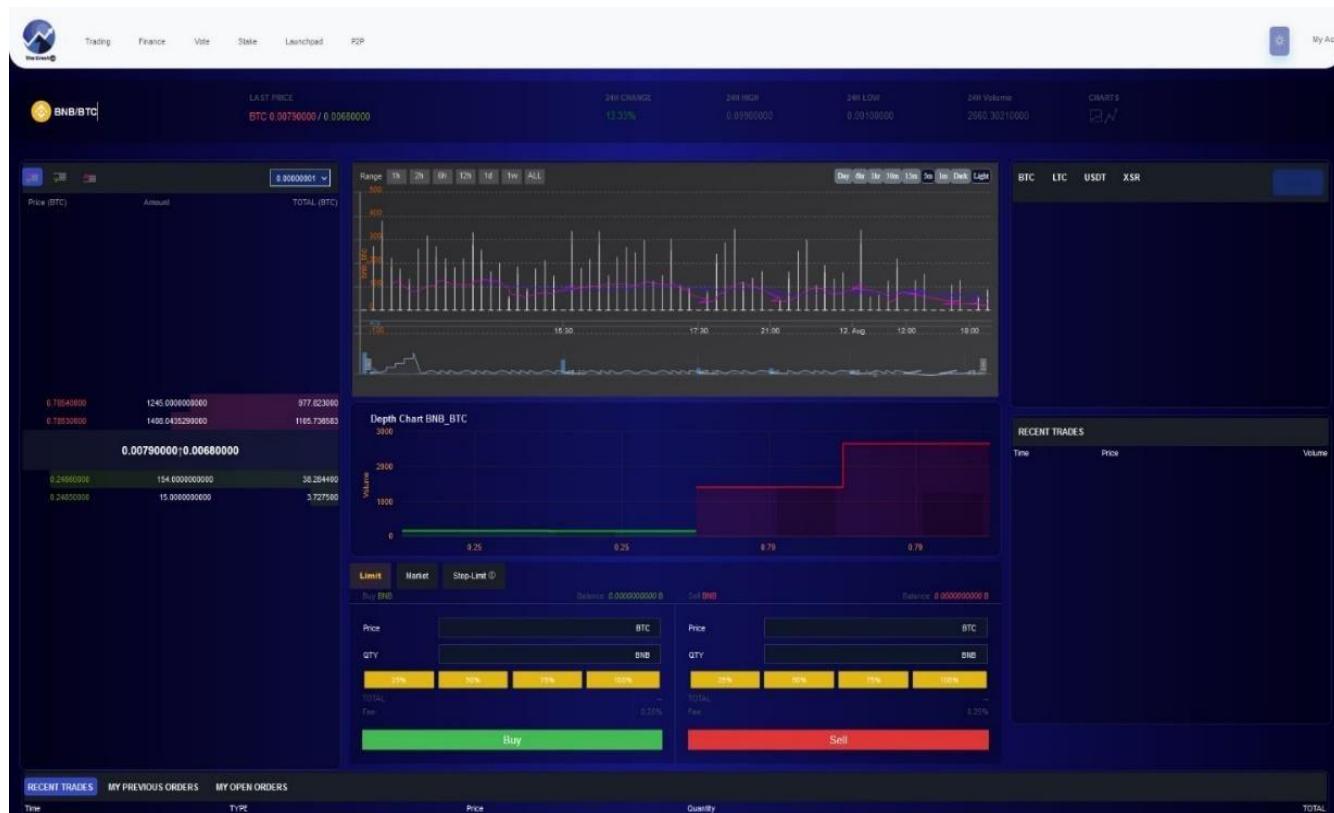

MYCOFFEE

Premium Quality

MyCoffeePremium

Example of how the initial phase is going, we will notify you of the events until it is completed:

Within the own and private Exchange for the community you will have an affiliate program (direct), the management and entry of new associated Tokens, bonuses, news, Stake, voting, etc..

We will inform you of the entire process.

7.7 Foundation

Due to privacy and lack of time, we will reveal it later in the Whitepaper update.

MYCOFFEE

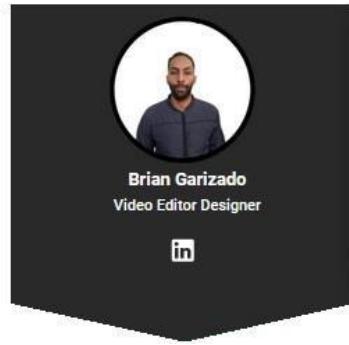

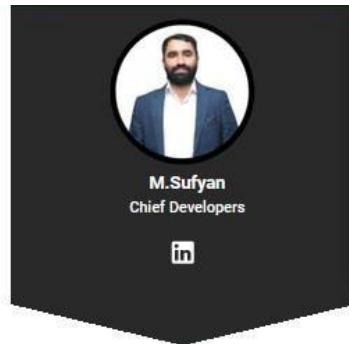

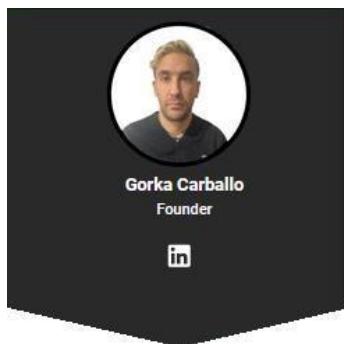

Premium Quality

MyCoffeePremium

8. Corporate Team

They are responsible for ensuring that the management of the **MY COFFEE** Ecosystem and the **THE CREST** Token as well as the marketing system create a good synergy and everything is properly managed.

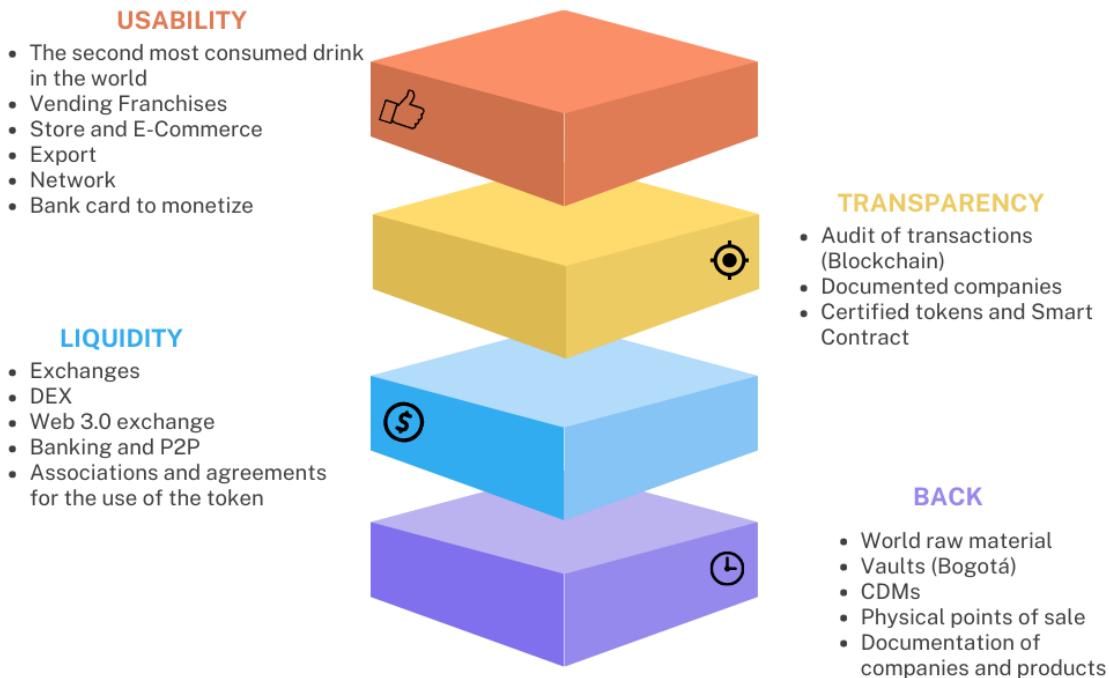

9. Sustainability

9.1 The Economics of MyCoffee and TheCrest

When we talk about the **MY COFFEE** ecosystem we can give several examples, mechanical or universal. The ecosystem is managed by a section of factors where the start of its energy is based on Bitcoin and the Stablecoin (for example, BUSD and will be our future kinetic energy to become its own ecosystem, to reach this point the ecosystem must be solidified with great liquidity and community,

THE PILLARS OF THE ECOSYSTEM

The same thing happens in financial systems and living organization charts, from the creation of money to reaching cryptography and Bitcoin, its own decentralized economy was developed that replaces all intermediaries, giving rise to a new economy.

MYCOFFEE

Premium Quality

MyCoffeePremium

In this case, the economy of **MY COFFEE** can be imagined in such a way that we use the decentralized market of cryptocurrencies and tokens as a means of starting and once the inflection or maturity point (starting) is reached, we will replace that energy with **THE CREST** token giving usability, creating self-dependence and attraction to currency in all associated products.

9.2 Franchises and NFTs

Often as our **MY COFFEE** ecosystem advances, we will generate a system of franchises that will be represented in "physical" points of sale (see videos on our official YouTube channel) which any crypto holder will be able to visit at the national level of Colombia as in the abroad by our representatives.

In these points of sale, **THE CREST** Token will be given usability, liquidity will be generated with the sales and it will return to the ecosystem so that the transformation of sales is reflected in more support for the community with the value of the Token.

. The NFTs (Non-fungible tokens) will come in 2 ways, there will be digital ones that we can sell to the community casually and in the physical packaging of the different varieties of coffee that we work with. The latter will be able to the coffee buyer, to scan the QR code with his cell phone, and integrate his wallet on the web you will find your saved NFTs to create a collection that represents prizes such as courses, gifts, free packages, or equally TCT tokens or dollars (USDT or BUSD)

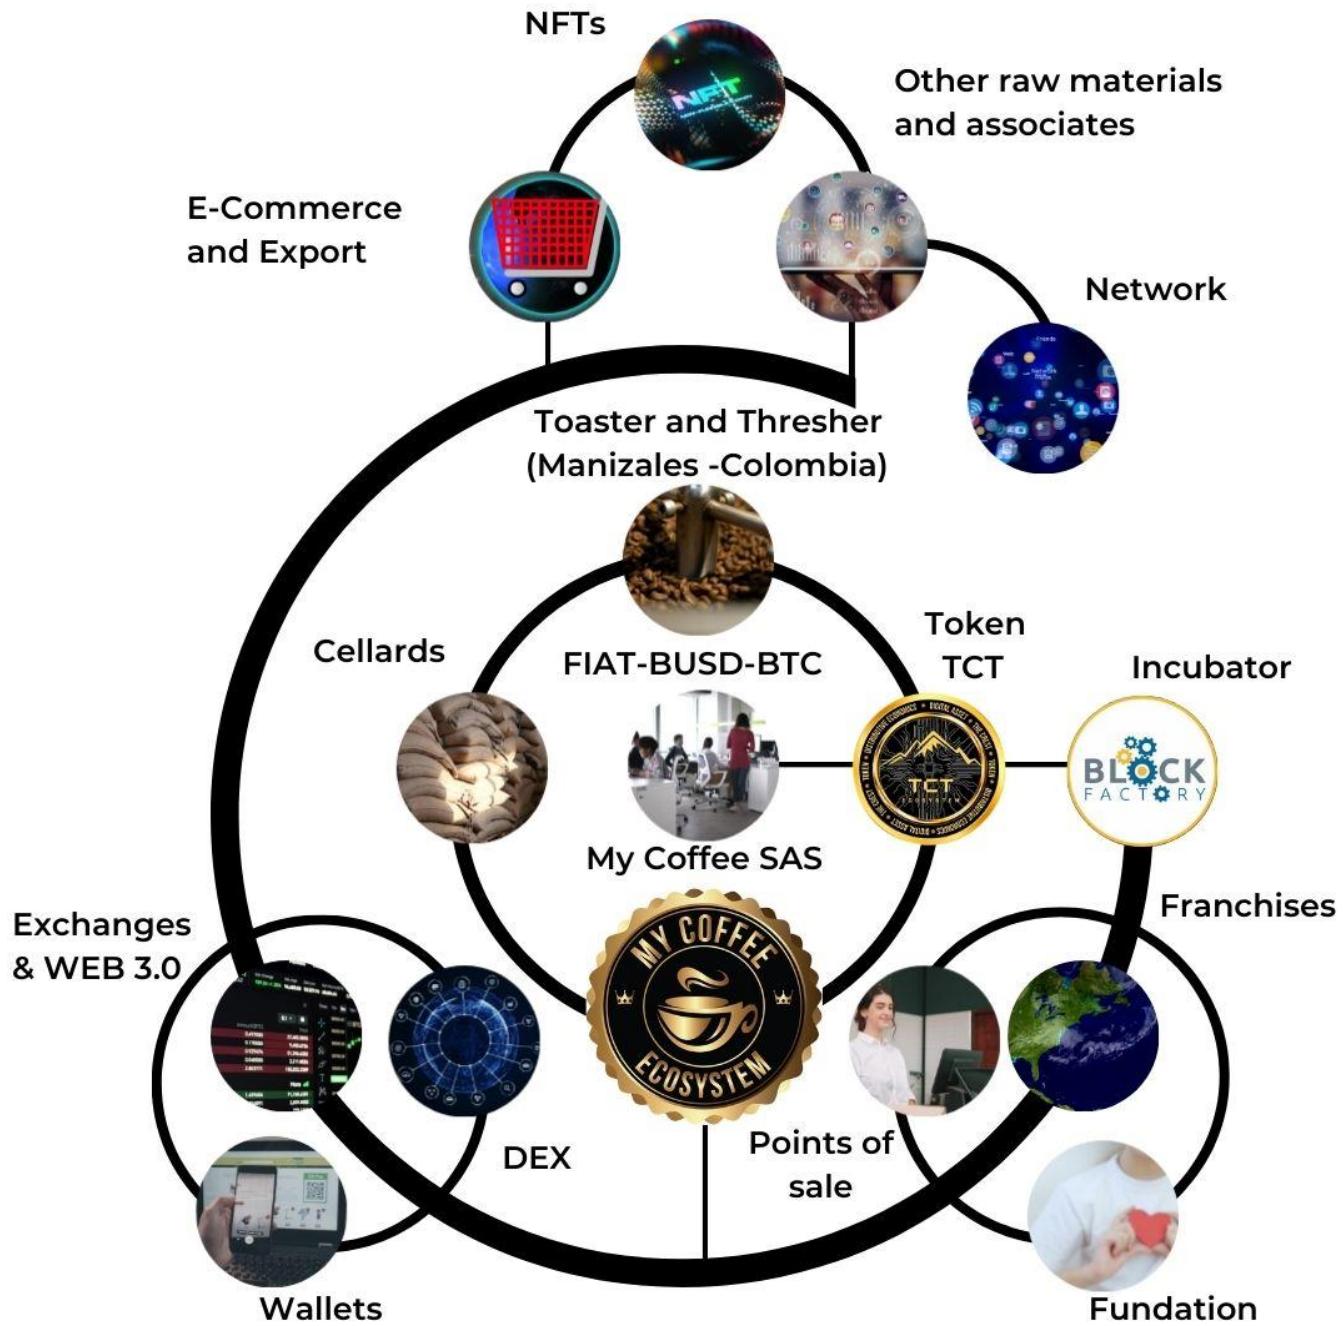

MYCOFFEE

Premium Quality

MyCoffeePremium

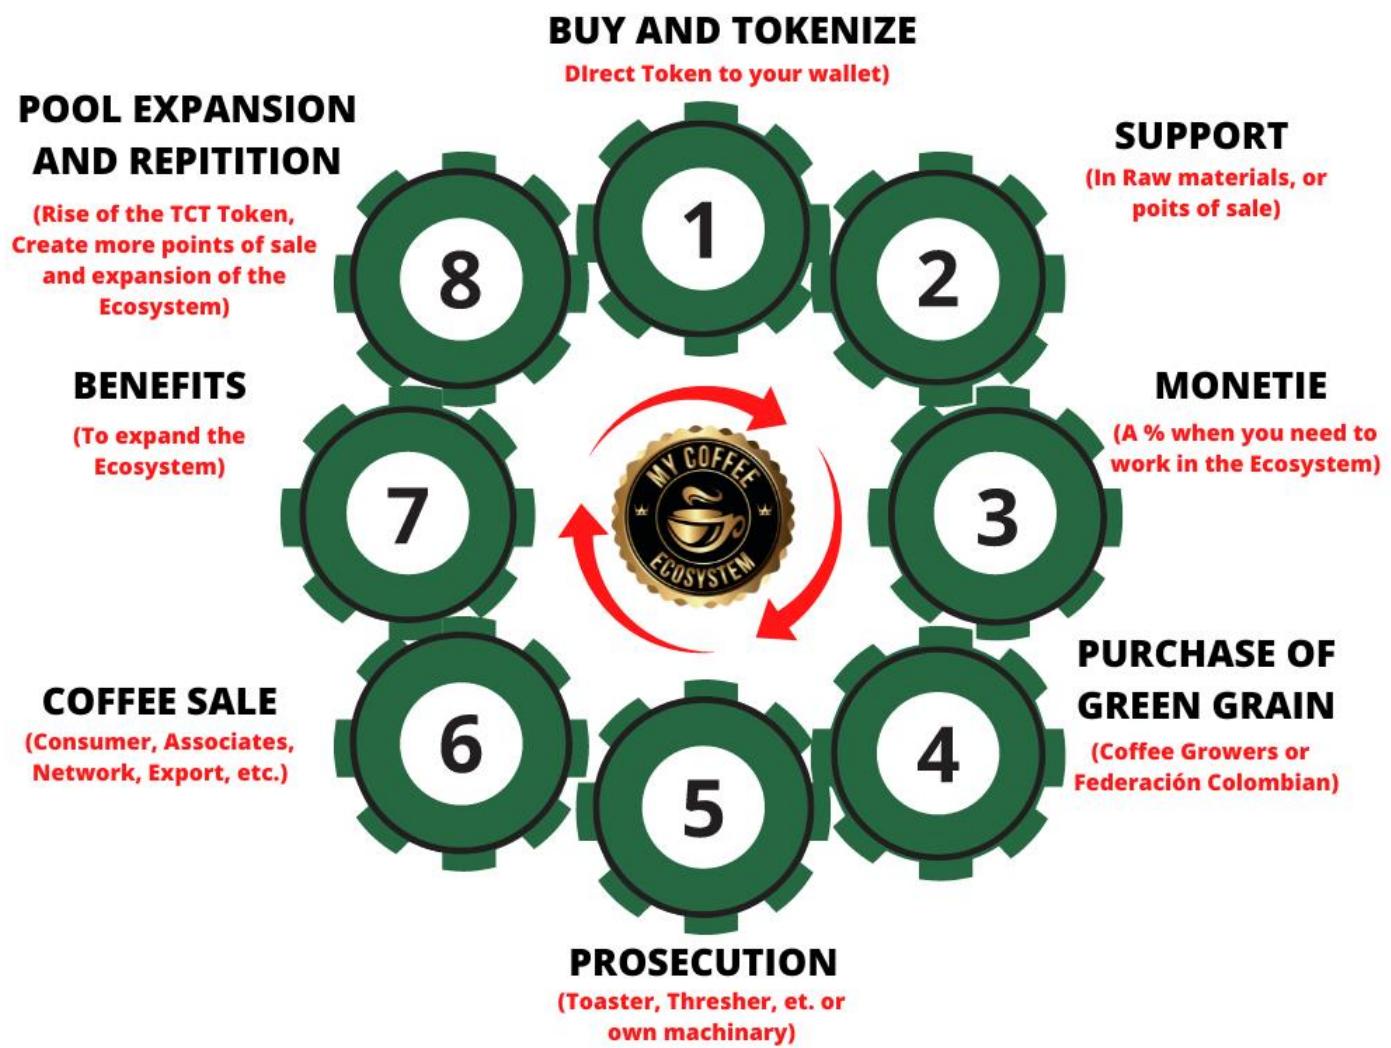

9.3 Ecosystem

9.4 Recirculation and Expansion of the Business

9.5 Real liquidity, ICO and future

One of our maxims or perhaps our greatest concern is to return to a sustainable and recirculating business but above all liquid in the market so that the community does not have worries. The eagerness of ecosystem customers to sell often knocks down value because they have not been educated in the

Ecosystem and our main objectives are to create the need and demand but above all to EDUCATE in the financial world and attract the curiosity of Asians, Americans, Europeans, etc. in the market. and see in **THE CREST** a very interesting coin, strong for trading and its usability.

What are the Projections?

Whether you buy the cryptocurrency in an ICO launch, on the www.mycoffee.pro website, or buy it within the market with the Exchanges, what we seek is to create a trend where supply and demand adjust, where the benefits of sales "add to total liquidity" the value is strongly maintained by a base price "of coffee properties and a sale index" and whereas normal **THE MONEY OF THE COMMUNITY IS NOT TOUCHED AT ALL** other than to generate assets that They give benefits such as points of sale, raw materials, etc. Or, **if applicable, leave it in a liquidity pool, and the community's capital is not spent to create show business and speculation.**

The revaluation after the ICO in the first instance will be for everyone and Colombian citizens will be invited (by proximity) who also have the possibility of seeing the raw material in the warehouses, later it will be open to everyone as we progress with a stop sign.

Our initial value is going to be **\$0.10** in **THE CREST** token, we base our billing on an indicator and oracle, and our index starts from point 0 because we create our "market as a community and the price of coffee", therefore, according to the increase of sales (coffee properties) will increase

the community and so many tokens in the market) before and after the exit of the market will rise with **organic growth and not be manipulable.**

Our platform will not have a staking system because our objective is not to generate tokens out of thin air (or they would be devalued), but rather each circulating token will represent a certain amount of coffee or liquidity from "real" sales, but in the future, our platform could have a system of rewards when locking your Tokens which will allow the token holder to obtain returns in BUSD for having their

Tokens locked. This step will only occur when the numbers add up, the project is advanced and there is no type of risk that affects the ecosystem.

Where does the BUSD come from to pay the rewards? These will come from the profit and reinvestment of each pound of coffee processed and businesses in the ecosystem.

10. Safety

THE CREST servers and nodes are working through the Binance Chain (BC) Blockchain network, it is the chain of blocks that works in parallel to the Binance Chain. In this case, BSC is oriented towards smart contracts, allowing it to operate on decentralized applications on a platform without permissions, a network with a high reputation and protected against any type of threat, being well prepared to be the first point of entry to any user in the world and, above all, they have to be well insured, to improve the experience for each of our navigators...

10.1 Distribution of funds and payments

Possibly when we talk about technology security, we are talking about the most important thing when it comes to moving crypto assets and security for adopters.

We are not going to be very explicit on these points, but if we give some indications:

1. Our **THE CREST** Token servers through BSC are cold wallets with a different provider than web servers.

2. **THE CREST** servers do not have any type of link for external payments, it is not connected to the external Blockchain.

3. The adopters of **THE CREST** Token will use wallets such as Trustwallet or Metamask on their PC or mobile which are holders of their 100% decentralized control, they will also be able to use Exchange wallets.

4. The rest of the tokens by contract will be distributed among the DEX, wallets, and procedures for the Exchange platforms and products that are considered for the use of new products.

5. **THE CREST** wallets will have a blocking system that will be released according to the purchases that exist in the market and thus does the currency. The more the ecosystem grows, the more

Strong in liquidity will be created and the founding partners will have a multi-signature that they will not be able to take out without permission. Also in the future, we will manage an association (audit) that makes this control transparent and periodic to the community.

6. The DEX or Exchange (once created) will be for everyone (with a previous KYC) they will have the option of earning rewards and the possibility of visiting coffee storage warehouses in case they wish to exchange their tokens for raw materials. This will change as the ecosystem progresses.

11. Cutting Edge Technology

With **THE CREST** Token, we want to be at the forefront of technology, both technological and commercial and use. For this reason, we have created and will continue to create everything the market demands with the Blockchain Binance Chain network. (BC).

11.1 Data sheet

FICHA TÉCNICA

Name: **THE CREST**

Abbreviation: **TCT**

Mininga: **PoS de Binance Chain**

Algorithm: **Consenso Proof-of-Staked-Authority (PoSA)**

Functions: **Minting**

Decimals: **12**

Contract: **0xb4ae1dfeef9224f89d48afbcf9fa49f08df90f26**

Full Supply: **500.000.000** - Inicial: **2.000.000**

Percentage for mining: **100%** - Inicial: **0.4%**

Community coins: **80%**

Corporativo coins: **10%**

Social reinvestment: **10%** (Maintenance, nodes, technology, machinery, marketing for advisors, influencers, media, etc.)

Contract: **0xb4ae1dfeef9224f89d48afbcf9fa49f08df90f26**

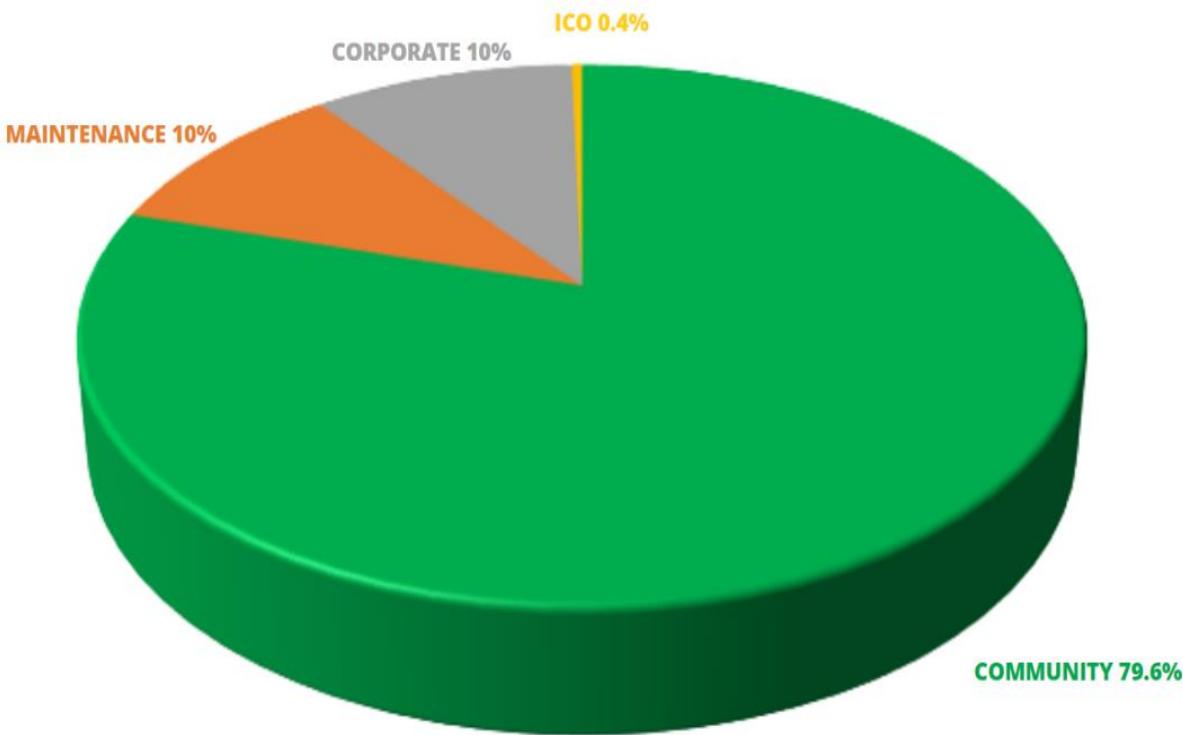

11.2 Financial Distribution

The distribution of the **THE CREST** Token will be 500,000,000 Tokens, with an initial phase of 2 million of the Supply of "liberated" tokens (0.4% of the total) to begin management.

The security is that practically all the currencies will be blocked according to the purchases obtained from the coffee, and the corporate will have 10% of Tokens, and 10% of Tokens in social reinvestment (technological expenses, machinery, maintenance of the ecosystem, etc.).

80% for the entire community that buys, mints the currency and helps the **MY COFFEE** ecosystem and **THE CREST** community grow.

* How are the coins released? Of the 100% of the coins, only those that represent **physical coffee and real liquidity will be available**. Each CDM (certificate of merchandise deposit) that is sold releases so many coins. **The unreleased coins do not represent physical coffee but there will be a principle already generated** (for example 2 million of the 500 million to start), the rest will not be in circulation and only when physical coffee is purchased are they automatically unlocked and generate more liquidity for the Ecosystem.

* Token holders who wish to lock their assets at certain times will be able to receive rewards in BUSD (1 USD Stablecoin). Future option when the ecosystem is large and secure.

11.3 Blockchain technology

What then is the chain of blocks? Well, a gigantic account book in which the records (the blocks) are linked and encrypted to protect the security and privacy of the transactions. It is, in other words, a distributed and secure database (thanks to encryption) that can be applied to all types of transactions that do not necessarily have to be economic.

This chain of blocks through Binance Chain (BC) <https://www.bscscan.com> has an important requirement: there must be several users (nodes) that are in charge of verifying those transactions to validate them and thus the block corresponding to that transaction (in each block there is a large number of transactions that, yes, is variable) is registered in that gigantic account book.

HOW DOES BLOCKCHAIN WORK?

- 1 A wants to send money to B

- 2 The transaction is represented on the network as a "block"

- 3 The block is broadcast to all parts of the network

- 4 Those in the network approve that the transaction is validated

- 5 The block can then be added to the chain, providing an indelible and transparent record of transactions.

- 6 Money moves from A to B

11.4 Binance Chain Description (BC)

We have developed the token on the BC network due to the lower value of the commissions for each transaction and its high scalability.

Also the possibility of working with a pair of Stable Coin with a value of \$1 (BUSD)

The Smart contract (smart contract) will have special characteristics to avoid manipulation or that the creators of the token can have access to liquidity or introduce hundreds of thousands of Tokens without support.

We will create a **PancakeSwap** style liquidity pool (<https://pancakeswap.finance>) to allow investors who want to get out of the business at any time to liquidate their token from the same sale page, WEB 3.0 system.

Each token purchase on the web generates the unlocking of the tokens from the main wallet, these will go to the wallet of each investor, in this way we support the operation that for each token there must be the equivalent of 1 pound of coffee processed, all this to guarantee that creators do not issue Tokens that are not backed, except those of the initial public offering.

11.5 What is a Smart Contract?

A smart contract is a computer program that facilitates, secures, enforces, and executes recorded agreements between two or more parties (for example, people or organizations). As such, they would assist you in negotiating and defining such agreements that will cause certain actions to occur as a result of specific conditions being met. **THE CREST** has the ability to run this technology to run the

transmission of value according to the conditions programmed by the user. A smart contract is a program that lives in a system not controlled by any of the parties, or their agents, and that executes an automatic contract that works like an if-then statement of any other computer program. With the difference that it is done in a way that interacts with real assets. When a pre-programmed condition is triggered, not subject to any type of human evaluation, the smart contract executes the corresponding contractual clause.

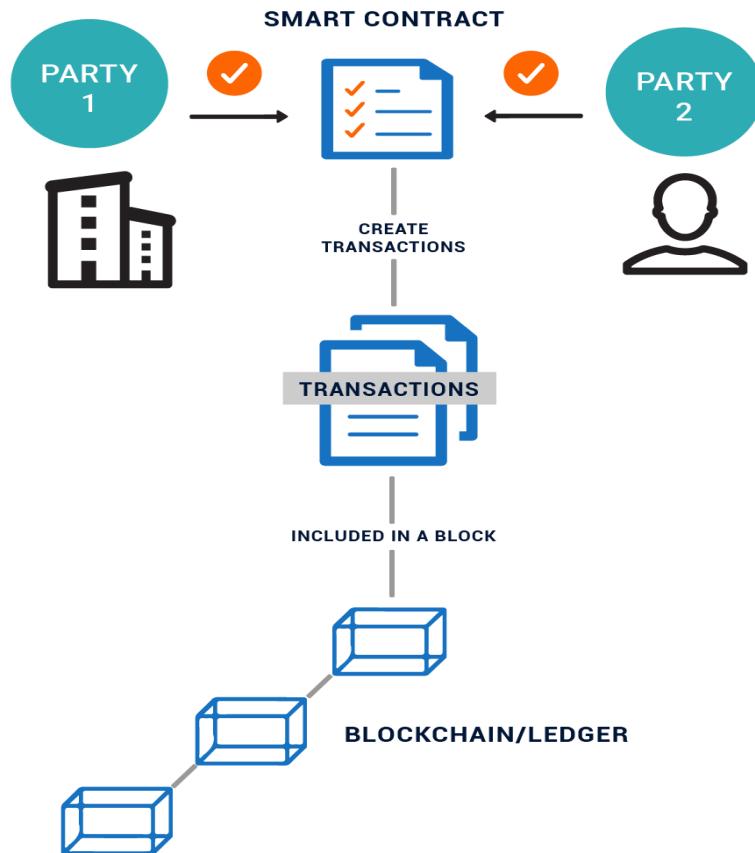

The Smart Contracts of the **MYCOFFEE** and **THECREST** ecosystems aim to provide greater security than traditional contract law and reduce transaction costs associated with contracting. The transfer of digital value through a system that does not require trust opens the door to new applications that can make use of smart contracts.

They could be carried out in any transaction that requires a registered agreement between the parties, such as, for example, the contracting of financial or insurance products, guarantee deposits, purchase and sale operations of financial instruments in the stock markets, syndicated loans, and purchase royalty sales. Smart contracts are also typically comprised of a user interface and sometimes emulate the logic of contract clauses.

MY COFFEE and **THE CREST** will be systematically issuing video tutorials and guides for those users who want to learn about the whole process.

BLOCKCHAIN AND SMART CONTRACTS - FLOW DIAGRAM

12. Wallets

12.1 Wallets online (PC y móvil)

THE CREST Token is made up of multiple platforms and software developments created for Binance Chain (BC). Among them, we find one of the main ones such as wallets or purses.

At www.mycoffee.pro you will have several versions of wallets for users who acquire **THE CREST** token, so that they can operate in real-time, wherever they are, with any device within their reach.

At www.mycoffee.pro it has locally installable wallets or purses (PC wallet) where downloadable software was developed, ONLY FROM ITS OFFICIAL SITE.

Any other site is not recommended for use.

Once downloaded, these types of wallets are installed like any conventional program. Only the type of operating system for which it will be used should be verified. After being installed, the wallet will carry out a synchronization process, which acquires the information from the network and leave, it for proper operation. The local purse or wallet has many advantages since information can be backed up and backed up on a cold device (such as a flash drive); this way your balances will be safe with you. But, you must also remember that, in case you want to use it on another computer, you must carry out the same installation and synchronization process described above, with the addition of applying the backup file.

For those who prefer to be in control of their balances on their mobile phone, any user of **THE CREST** token will be able to manage it in an online wallet along with their balances via **Metamask** and **TrustWallet**.

MYCOFFEE

Premium Quality

MyCoffeePremium

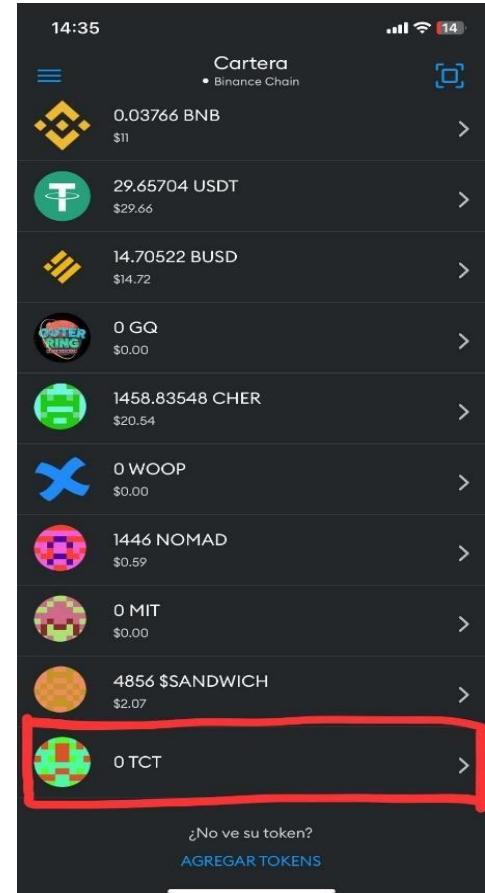

May establish an intuitive and dynamic environment where you can send and receive balances

THE CREST, in real-time from any computer. We also consider in this case, the use of mobile devices, so the platform has been designed in a responsive way, so that it is adaptable to them.

Add Token to Metamask:

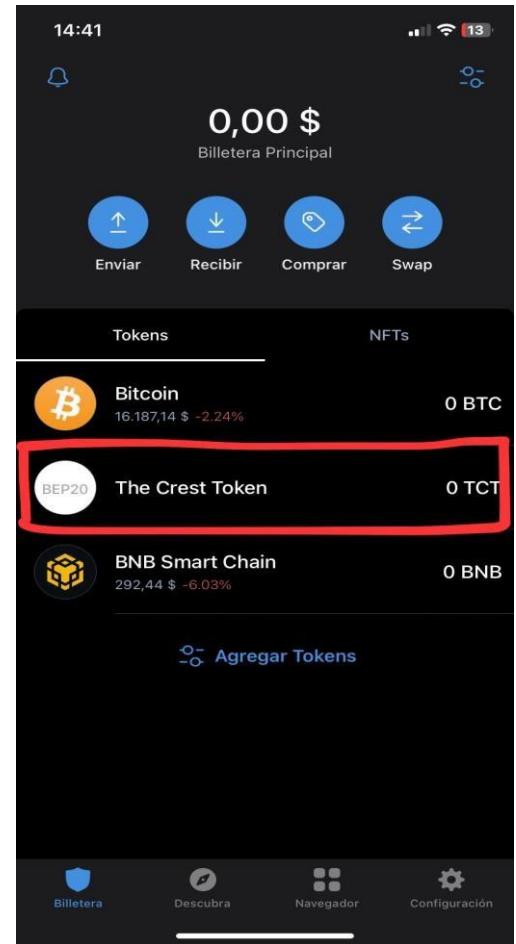

- Go to settings / Networks / Add Network
- Network Name: Binance Smart Chain Mainnet
- New RPC URL: <https://bsc-dataseed.binance.org/>
- ChainID: 56
- Symbol: BNB
- Block Explorer URL: <https://bscscan.com>
- Add Token: **0xb4ae1dfeef9224f89d48afbcf9fa49f08df90f26**

MYCOFFEE
Premium Quality

MyCoffeePremium

Add Token to Trust Wallet:

- Select coin filter
- Go down all and select add custom Token
- Select Smart Chain network
- Add Token: 0xb4ae1dfeef9224f89d48afbcf9fa49f08df90f26

13. Code test and release

Once the pertinent tests with integrations, Blockchains, and distribution of wallets are finished, the community is expected to be thousands of people, each client verified by a KYC (those that come from the Exchanges) but before that, it will be from the same website www.mycoffee.pro with high liquidity in the market and as a precaution in the creation of mining pools, the code is released in the relevant media.

MYCOFFEE

Premium Quality

MyCoffeePremium

13.1 PHASE 1: Sale of THE CREST at ICO MY COFFEE

Directly from www.mycoffee.pro you can purchase your coins.

We will have two classes of interested Coin Adopters who want to acquire **THE CREST**, those who want to buy 100% of the currency directly on the www.mycoffee.pro page (we will call them **Adopters A** and those who acquire the value of the currency in the DEX or Exchanges with the possibility of trading or Hold and we will call them **Adopters B**.

As the ecosystem progresses, we will go to platforms with greater liquidity where we will be evaluating and explaining the processes.

The private investment round (ICO) will take place on December 5, 2022, resulting in a symbolic collection of 2 million coins since we started with several points of sale and as many arrobas of coffee (12.5 kilos) as we buy and which will be released in tokens for private investors and the future leadership of the ecosystem at a price of \$0.10 per Token.

Said the proceeds will be used for

the

purchase of more raw materials (coffee) and management of points of sale (mainly) and the DEX, digital marketing, generating liquidity in the pool, DEX, Exchange, and all relevant procedures such as events, trips, etc. they will come from the “profits” of the Ecosystem (not from the money of the community because the protection of the community is the most important thing).

13.2 PHASE 2: After the ICO

During the first quarter of 2023 onwards, the business will begin to take shape and progress with the expectation of going out to a broader market (DEX and Exchanges).

During that time we restructured the corporate team and managed new updates resulting in agreements with companies, new products for the store www.mycoffee.pro/store, and a Marketplace (virtual store) that accepts cryptocurrencies and token payment to create more sustainability.

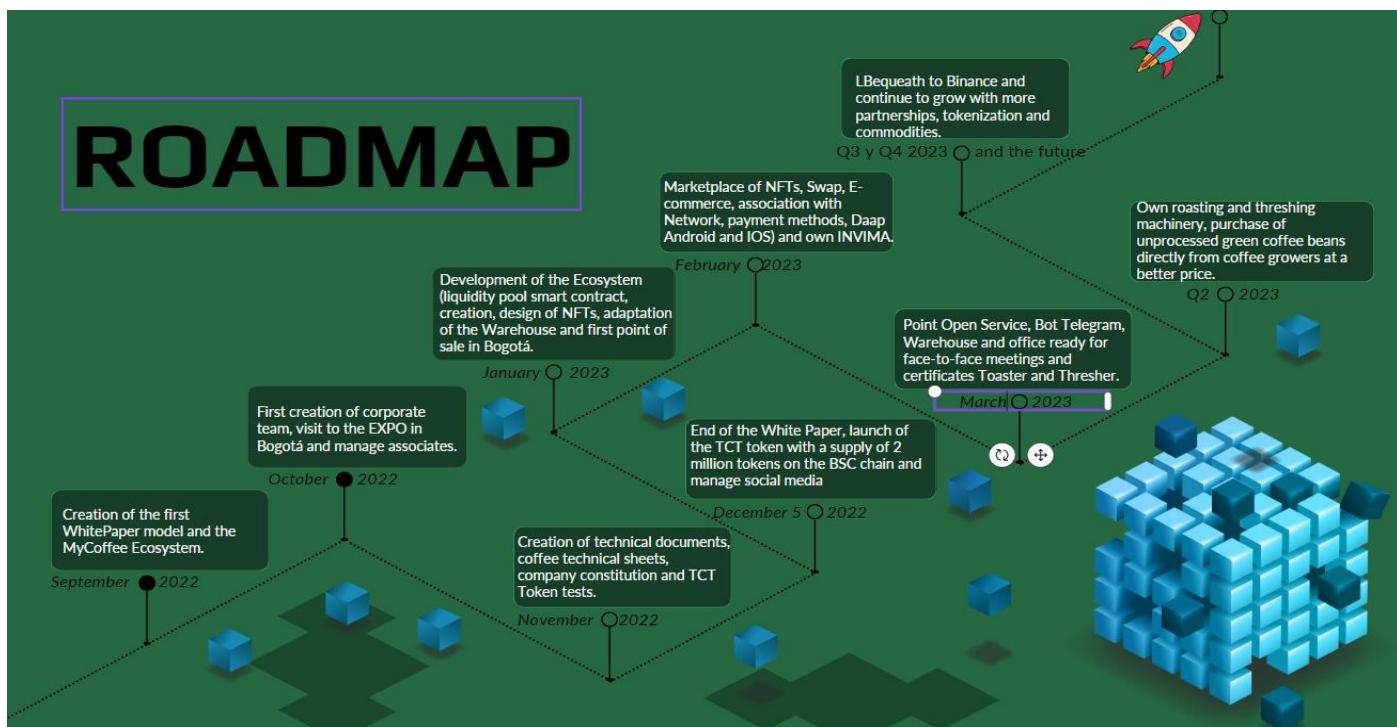

13.3 Consolidation

From Q2 2023 onwards in future dates, the sale stage and all the collection will be managed from the TOP Exchanges platforms. Depending on the growth of the community (thousands of wallets) and the recirculation of the cryptocurrency in the markets (it is an average forecast) it can vary in the year from 10 to 100 Millions of USD in liquidity from the community where we hope to manage many deals and partnerships.

14. RoadMap

14.1 Pasado - Presente - Futuro

15. Conclusion (summary)

Although it may seem like a lie or a cliché, this can be one of the most difficult explanations to make within a Whitepaper due to the mere fact that human beings have a tendency to think that the conclusions they read are based on individual interest and that the one who wrote This conclusion is because you are interested in defending your opinion but we encourage everyone interested in www.thecrest.io and www.mycoffee.pro to review the entire ecosystem and this table to compare the technical qualities of our cryptocurrency with respect to what already exists in the current market. Review the support and transparency that they can give and other projects do not.

You have already seen the technical file that mentions the % blocking of coins, there is also the possibility of burning them and creating revaluation, it is contemplated and obvious that a value of a coin is based on the price of "supply and demand", like any asset.

The value of an asset is calculated on the "released" or circulating coins, not with the "total or awarded" coins, the same thing happens with TOP coins such as BNB upon reaching its Maximum supply, ADA, DOT, AVAX also They are in this process and other TOP coins that have already managed a lot of supply and have not released them all at once because that creates deflation and as such the price falls.

An example is to put how we mined coffee, as such when creating coffee, we create wealth (Tokens), therefore, there must be as much coffee equal to the Token created and when sales of coffee beans are managed (kilos, pounds, arrobas or sacks) more liquidity comes and then more liquidity is sent and we put it into the DEX ecosystem, Exchange, we buy more coffee, more points of sale are created, etc. creating a base floor on the Token and those who sell it we can buy them back, burn them or remove them from circulation.

15.1 Comparative Chart

15.2 Individual Valuation

From **THECREST** cryptocurrency we must be objective, as a product it is focused on usability, already 95% of the coins and tokens today are only speculators, if we add that the new fashion is the POS that investors like so much if we add that it has Binance Chain (BC) technology, we are already getting the best of technology, it manages SmartContract and NFT, the use in stores and services of all physical types in warehouses and online in E-Commerce we are before a doubt one of the best cryptocurrencies on the market that both the client and investor want in terms of profitability and security within technology.

15.3 MY COFFEE virtual store

Within the corporate team and the business model, transparency has been and will be the best weapon of attraction for clients or people who want to promote it. This is a huge sale against the competition, but they are also experienced people with a lot of capacity in investigating and analyzing fraud errors so that this does not happen in **MY COFFEE** and it's **THE CREST** token.

As a business model, we must say that it had not been done in such a serious way that any user can earn money in a coin or token that is long awaited from their ICO, DEX, or from their release on the EXCHANGES, many of the ICOs or Cryptocurrencies last 6 months and up to a year to hit the market to **see how the price collapses and leave customers frustrated**, which for us is just 2 months and we will already be generating profits, high liquidity, usability, and the price will not only be sustained, otherwise it will go up in

There will be explanatory videos so that the community understands solvency.

In **MY COFFEE** the usability of the currency in products, the market or entry to Exchanges is calculated

to create supply and demand, the availability of liquidity in the repurchase, and above all a bright future to attract all kinds of future partnerships. As we have already expressed, we do not want to make the same mistakes that other systems make, we care about people, we care about healthy growth, and, above all, about creating a good environment between online businesses and market liquidity.

Last but not least, this is an assessment

An individual which we hope that "you do yours" so that ours makes a dent in the hearts and minds of the people, in which even the most skeptical will see that there is a Token with the best market requirements and where the Store, the Marketplace, the physical points, etc. provides logic, experience and not offering dreams or an uncertain path.

16. Media

Below, we detail a list of the only media approved by the **MY COFFEE** project as an Ecosystem and business model and **THE CREST** as the High Usability Token.

Any address other than those expressed below does not belong to the project in question. Be cautious when reading information.
